**SUBJ:** Aircraft Type Designators

---

This directive provides aircraft type designators (abbreviations) for the aircraft that most commonly use air traffic services. Aircraft type designators are principally used in air traffic management and in air traffic automation systems. Additionally, this directive provides information used by air traffic control for wake turbulence and runway separation.

## Chapter 1. General

**1-1. Purpose of This Order.** This order provides standard abbreviations (aircraft type designators) for the most common aircraft that utilize air traffic services (ATS). FAA Order JO 7110.65, Air Traffic Control, and FAA Order JO 7110.10, Flight Services, specify the use of aircraft type designators contained in this order; however, these type designators may also support other Air Traffic Organization (ATO) policy or guidance.

**1-2. Audience.** This order applies to all ATO personnel and anyone using ATO directives.

**1-3. Where to Find This Order.** This order is available on the MYFAA employee Website at [https://employees.faa.gov/tools\\_resources/orders\\_notices/](https://employees.faa.gov/tools_resources/orders_notices/) and [http://faa.gov/air\\_traffic/publications](http://faa.gov/air_traffic/publications).

**1-4. What This Order Cancels.** This order cancels FAA Order JO 7360.1J, Aircraft Type Designators on the effective date of this order.

**1-5. Explanation of Changes.** Changes from the previous version of this order:

- a.** Additions, Deletions, and Changes to aircraft information are shown on page ADC-1.
- b.** The term “tiltrotor” was replaced with “powered-lift” to align with Title 14 of the Code of Federal Regulations.

**1-6. Distribution.** This order is available online and will be distributed electronically to all offices that subscribe to receive email notification/access to it through the FAA’s website ([http://www.faa.gov/air\\_traffic/publications/](http://www.faa.gov/air_traffic/publications/)).

## Chapter 2. Aircraft Type Designators

**2-1. Definition of Aircraft Type Designator.** An aircraft type designator is an abbreviation representing an aircraft make, model, and series. The International Civil Aviation Organization (ICAO) provides standard type designators to ensure consistency of aircraft information shared between ATS automation systems and between ATS providers. Appendix A contains an alphabetized list of aircraft type designators that are approved for use in the National Airspace System (NAS).

- a. An asterisk (\*) next to an aircraft type designator denotes a single-piloted military turbojet aircraft.

**REFERENCE—**

*Pilot/Controller Glossary – Single-Piloted Aircraft.*

- b. For Class B Service Area separation, the aircraft type designator of aircraft weighing 19,000 pounds or less is underlined. For example, BE23.

**REFERENCE—**

*FAA Order JO 7110.65, Para 7-9-4, Separation.*

### 2-2. Use of Aircraft Type Designators.

a. Aircraft type designators are used by ATS automation systems that exchange data and are primarily used in the provision of air traffic services, air traffic flow management, surveillance services, and air traffic service messages. To increase accuracy and reduce errors between ATS service providers, every effort should be made to use standard aircraft type designators.

b. The ICAO updates and publishes a new listing of aircraft type designators every 28 days. The FAA will conduct an analysis of a new aircraft's characteristics, including wake turbulence. The period between the ICAO's publication of new aircraft types and the ATO's adaptation of a new aircraft type designator in automation systems may take a significant amount of time. Consequently, use only the aircraft type designators published in this order.

**2-3. Formulation of Aircraft Type Designators.** The ICAO will formulate an aircraft type designator using the following principles:

- a. Only one designator will be assigned per aircraft type.
- b. A designator will be derived from the manufacturer's model number or name, or a common military type.
- c. The designator will not be longer than four characters and will generally begin with a letter.
- d. An assigned designator will not be changed for license-built aircraft when an aircraft model is sold to or manufactured by another company, when the manufacturer's name changes, or when the aircraft type is derived or converted from another type.
- e. A different designator for an alternate or subtype version of the aircraft will only be allocated when there is a significant difference in performance for air traffic services or no shared designator can be assigned.
- f. Homebuilt, amateur-built, or kit plane aircraft that exist in operationally significant numbers will be assigned a designator; however, these aircraft will only be listed under the original designer or under the manufacturer that produces or produced the aircraft type in series.

**g.** In general, a type designator will be assigned to an aircraft with a maximum certificated take-off weight of over 1,000 pounds.

**2-4. Special Designators.** The ICAO will generally not provide a unique aircraft type designator for aircraft with a maximum weight of 1,000 pounds or less. If an aircraft has not been assigned a type designator by the ICAO or the FAA has not published a type designator assigned by the ICAO, use one of the following special aircraft type designators:

- a. BALL** – Balloon
- b. GLID** – Glider (sailplane)
- c. GYRO** – Ultralight gyroplane (autogyro, gyrocopter)
- d. PARA** – Powered parachute (paraplane)
- e. SHIP** – Airship (blimp, zeppelin)
- f. UHEL** – Ultralight helicopter
- g. ULAC** – Ultralight aircraft

**h. ZZZZ** – Aircraft type not (yet) assigned a designator. Use with TYP/ and the aircraft type in Item 18 (Other Information) of the ICAO flight plan.

**NOTES—**

*1. The ICAO describes an ultralight aircraft as an aircraft with a maximum take-off weight of 1,000 pounds or less and a stalling speed not greater than 35 knots.*

*2. The ICAO describes an ultralight helicopter/gyroplane as a helicopter/gyroplane with a maximum take-off weight of 1,000 pounds or less.*

**2-5. Recommendations for Aircraft Type Designators.** Submit requests for an aircraft type designator to the ICAO:

<http://www.icao.int/publications/DOC8643/Pages/default.aspx>.

**2-6. Wake Turbulence Category (WTC).** The FAA uses a different method from the ICAO to provide wake turbulence separation but does require the WTC in the ICAO flight plan. The ICAO provides a WTC for aircraft assigned a type designator. In the ICAO flight plan, the WTC follows the aircraft type designator in Item 9 (Number and Type of Aircraft and Wake Turbulence Category). For example, A345/H, GAZL/L, E737/M, and is based on the maximum certificated take-off weight, as follows:

- a. SUPER (J)** – aircraft types specified as such in ICAO Doc 8643, Aircraft Type Designators;
- b. Heavy (H)** – aircraft types of 300,000 pounds or more, with the exception of aircraft types listed in ICAO Doc 8643 in the SUPER (J) category;
- c. Medium (M)** – aircraft types less than 300,000 pounds and more than 15,400 pounds;
- d. Light (L)** – aircraft types of 15,400 pounds or less.

**NOTES—**

*1. Where variants of an aircraft type fall into different ICAO wake turbulence categories, both categories are listed, such as Light/Medium or Medium/Heavy. In these cases, it is the responsibility*

*of the pilot or operator to enter the appropriate single character WTC indicator in Item 9 of the ICAO flight plan.*

**2. All Special Designators**, such as GLID, UHEL, ZZZZ, etc., require a WTC in an ICAO flight plan using the criteria above. In these cases, it is the responsibility of the pilot or operator to enter the appropriate single character WTC indicator in Item 9 of the ICAO flight plan.

**2-7. Aircraft Manufacturer.** A shortened name of the aircraft manufacturer is shown in capital letters, such as FAIRCHILD. A number in parentheses, for example (2), denotes another manufacturer using the same shortened name.

**a.** Appendix B provides an alphabetical list of aircraft manufacturer codes with associated aircraft.

**b.** Appendix D contains an alphabetized list of aircraft manufacturer codes with the full company name and country of origin.

**2-8. Aircraft Model.** Appendix C contains an alphabetized list of aircraft model names/numbers, including military designators.

**2-9. Class.** In this document, “class” is used to describe aircraft according to basic characteristics. The following terms are used to classify aircraft:

**a. Fixed-wing**

- 1.** Fixed-wing – Landplane
- 2.** @Fixed-wing – Amphibian
- 3.** \$Fixed-wing – Seaplane

**b. Gyroplane**

**c. Helicopter**

**d. Powered-lift**

**2-10. Engine Number and Type/Weight Class.** An abbreviation for the number and type of engine, and the FAA weight class used by FAA air traffic services. For example, 2J/H, 1P/S, 2T/L:

**a. Engine Type**

- 1.** C – A fixed-wing aircraft having two engines coupled to drive a single propeller
- 2.** E – Electric
- 3.** J – Jet
- 4.** P – Piston
- 5.** R – Rocket
- 6.** T – Turboprop/Turboshaft

**b. Weight (Aircraft) Class** definitions are provided in the Pilot/Controller Glossary:

- 1.** J – Super
- 2.** H – Heavy
- 3.** L – Large

**4. S – Small****NOTE—**

A “+” denotes an aircraft weighing between 12,500 pounds and 41,000 pounds. For Class B airspace rules, these aircraft are “large, turbine-engine-powered aircraft.”

**REFERENCE—**

P/CG Term – Aircraft Classes.

**2-11. Consolidated Wake Turbulence (CWT) Categories.** See FAA Order JO 7110.126, Consolidated Wake Turbulence (CWT), for definitions of these categories.

**2-12. Same Runway Separation (SRS).** Categorization criteria are specified in FAA Order JO 7110.65, Air Traffic Control, paragraph 3–9–6, Same Runway Separation.

**2-13. Land and Hold Short Operations (LAHSO) Groups.** FAA Order JO 7110.118, Land and Hold Short Operations (LAHSO), includes procedures and conditions for conducting land and hold short operations at designated airports. Aircraft with an assigned LAHSO group are listed in the appendices of this document.

**a.** TBL 1 is an air traffic control tool for identifying aircraft, by groups, that are able to land and hold short based on the available landing distance. Air traffic managers must utilize TBL 1 for identifying aircraft by groups that are able to land and hold short at their facility in accordance with FAA Order JO 7110.118, Land and Hold Short Operations.

**b.** At locations requesting to utilize LAHSO with aircraft requiring greater than 8,000 feet of available landing distance, air traffic managers must coordinate with the appropriate Flight Standards office and Air Traffic Operations to obtain a letter of authorization approving LAHSO.
